It is not all about technology and innovation

Energy Policy

Volume 117, June 2018, Pages 100-107

Demonstrating climate mitigation technologies: An early assessment of the NER 300 programme

Max Åhman ^a  , Jon Birger Skjærseth ^b , Per Ove Eikeland ^b 

Highlights

- The EU demonstration programme NER300 did only partly deliver as intended.
- CCS and large scale biofuels failed whereas as renewable electricity succeeded.
- The design put large-scale projects at a disadvantage.
- The wider energy and climate policy including demand pull did not deliver as intended.

Collateral damage and other difficulties

Operating gasification to biofuel plants

Göteborg Energi

GoBiGas

30 MWth biomass in
20 MW bio-methane, 5 MW heat out
TUW/Repotec/Valmet, Topsøe SNG
Operation 2014, 2017-2018 highlights:

- MCR capacity reached
- 1 800 uninterrupted hours

Mothballing decision taken

Enerkem

Edmonton

100 000 tons of RDF in
38 000 m³ of methanol/ethanol
Univ. Sherbrooke/Enerkem technology
Operation 2014, 2017-2018 highlights:

- MeOH to EtOH conv. installed
- Plans for project in Rotterdam
- ~220 M\$US from investors

Short-term op. & planned gasification to SNG plants, EU

Start-up 2018 RDF feedstock
4 MW bio-methane output
Outotec gasifier, APP plasma
AMEC FW VESTA SNG
27 M£ cost, 11+5 M£ support
Cadent (8.7 M£), APP, Carbotech,
Progressive Energy, AMEC FW.

Biomass feedstock
4 MW bio-methane output
ECN Milena gasifier, OLGA, ESME SNG
25 M€, cost, 6.5 M€ support
Engie, Gasunie, ECN, Royal Dhlman,
Synnova , PDENH.

Short-term planned gasification to biofuel plants, USA

150 000 tonnes/year biomass in
57 000 m³/year of BTL products
TC Global gasifier
Velocys microchannel FT
~ 200 M\$, 74 M\$ DPA funding (DoD)

160 000 tones/year MSW (before MTP)
40 000 m³/year of BTL products
Thermochem Recovery Int. gasifier
Emerging Fuels Technology FT
~ 280 M\$, 70 M\$ DPA funding (DoD),
Air BP and UA invested 30 M\$ each.

Power and heat at high efficiency

Photo Holger.Ellgaard - Eget arbete

2016 KVV8 – Värtaverket

345 MW CFB Steam 140 Bar/560°C

130 MW power gross, 200 MW heat + 80 MW from FG condensing. >100 % efficiency (LHV).

500 M€ investment. Boiler supply by Andritz

Pyrolysis, catalytic pyrolysis and hydrolysis to biooils

Company	Site	Feed	Year	Cap. ML/yr	Type	Status
Empyro (BTG)	NL	Wood resid.	2015	20	1 st ind.	Op.
Ensyn	CA	Wood resid.	2006, 15	20	Com.	Op.
Fortum	FI	Wood resid.	2014	50	1 st ind.	Op.
KIT	DE	Ag. residue	2010	2	Demo	
Metsä	SE	Wood resid.	2022	22	Com.	Plan

Hydrolysis						
IHI2	USA, IN	Wood resid	2017	5 tpd feed	Demo	Com.
G4 Insights	USA	Wood resid	2017	0.1 tpd feed	Pilot	Op.

Fast pyrolysis (~1-2 s, 450–550°C), op. plants in the EU

120 tonnes/d woody biomass
20 000 m³/y FPO +steam+0.5 MWe
U. Twente/BTG rotating cone proc.
19 M€, support from FP7

100 000 tonnes/y woody biomass
50 000 m³/y of FPO products
VTT/Valmet CFB process. 200 MWth
~ 32 M€ (excl. boiler plant), 8 M€ support

Catalytic pyrolysis and hydropyrolysis installations

Thermo-Catalytic Reforming (TCR®) technology

Slow pyrolysis, 4-10 min, at ~ 450°C,
catalytic (char) reforming at ~ 750°C
80 kg/h pilot op., 300 kg/h commis.
H2020 projects 2 SynFuels and FlexJet
to establish 500 kg/hr units.

Catalytic hydropyrolysis in hydrogen at
400–550°C, 2-3 MPa pressure.
Demo in India 5 tonnes/d feed 2017
Developed by GTI and licensed to CRI
Studies for 1st ind. plants in NO and IN

Hydrothermal processing to intermediates and gas

Company	Site	Feed	Year	Cap. ML/yr	Type	Status

Developments lignocellulosic ethanol

CLARIANT

Announced plans for plants in SL, RO.
See SPM presentation

April 2017

LoI with Pioneer Point Partners for
an investment up to 160 M€ in the
MEC plant conditional on political
framework and long-term
government support is settled.

Capacity 10 million liters ethanol from
saw mill dust (pine)
Commissioning 2017

Cellunolix® Kajaani, Finland

PRAJ: Capacity 1 million liters ethanol from ag. residue
End-to-end integrated demonstration plant
Commissioning 2017 –

Intermediates to hydrocarbons

Sugars and syngas to higher alcohols and hydrocarbons

Company	Site	Products	Year	Cap. ML/yr	Type	Status
Amyris	2*NZ KO, AU	Various non-fuel		50 70	Comm. Comm.	Plan Plan.
DSM (ex-Amyris)	BR	Farnesene	2012	40	1 st ind.	Op.
BUTAMAX	UK USA	Iso-butanol	2012	0.2	Demo 1 st ind.	Com. Plan.

Microalgae – Demo Plants

	Company		Year	Type	Cap. kton dw/y	Product	Future
1	InteSusAl	PT	2015	Microalgae	0.04	Biodiesel	Non-fuel
2	All-Gas	ES	2014	Microalgae	0.014	Biogas	Fuels
3	Algafuel	PT	2014	GE μ -algae	0.001	Ethanol	HTL-oil, non-fuel
4	Algae Tech	AU	2018	Microalgae	Pilot (IN)	Biofuel	

Many e.g. Algenol, Biofat, BuggyPower, Sapphire, Joule, Solazyme, Helliae, Allmicroalgae have shifted from biofuel to non-fuel products in 2014-2017

Hybrids: Power & heat integration with other RES

Brønderslev DK: First hybrid CSP/biomass ORC CHP Plant

Technology provider: Aalborg CSP A/S. Total cost 35 M€, 2 M€ in support

Power-to-X; some examples

MANY MORE EXAMPLES EXIST

Power-to-biofuels

Hybrid biofuels efficiently utilizes H_2 to :

- ✓ increase biogenic C yield
- ✓ replace fossil H_2

Suming up and take-away messsages

- R&D institutions mentioned VTT, Fraunhofer, KIT GTI, ECN, LNEG, LTU, Univ. Twente, Univ. Sheerbroke, TUW, AAU etc. algae R&D places and others not mentioned.
- Spin-offs BTG, Susteen, Repotec, Enerkem, algae companies, Phoenix Biopower,, Ensyn etc.
- Major industrials, Andritz, Clariant , M&G,, Valmet etc.
- Industrial implementation of R&D requires patience.
- The economics of bridging the “development gap” to operational 1st industrial plant is a main bottleneck for biofuels, in particular challenging for one-product start-ups.
- Support e.g. Investment Fund should be designed with this in mind to be effective in reaching the desired impact.
- Also policy must be sustainable over time, not only biofuels

- Industrial implementation of R&D requires patience.
- The economics of bridging the “development gap” to operational 1st industrial plant is a main bottleneck for biofuels, in particular challenging for one-product start-ups.
- Support e.g. Investment Fund should be designed with this in mind to be effective in reaching the desired impact.
- Also policy must be sustainable over time, not only biofuels

Examples of novel ideas in early stage development

Bionic leafs which uses solar light to split water into hydrogen and oxygen, combined with another microorganism consumes hydrogen and carbon dioxide to produce hydrocarbons, e.g. iso-propanol

Source The Conversation 2015-02-12

Bio-solar cell factories (BSCF), in which phototrophic micro-organisms (e.g. cyanobacteria, eukaryotic algae) directly catalyze the conversion of CO_2 and H_2O into oxygen and chemical energy, e.g. fuel molecules.
